LINNAEUS'S TWO-TOED SLOTH

A slow-moving mammal that lives in rainforest trees.

1. **What can it see, hear, or feel?** Sharp hearing picks up tree movement, a keen nose finds food, and claws feel every branch firmly.
2. **Where does it live — and why?** It lives high in the rainforest, hanging upside down, with green algae in its fur as camouflage.
3. **How does it send messages?** It is mostly silent, but hisses when threatened, slashes with its claws, and stays still to hide.
4. **How does it learn?** A young sloth clings to its mother for up to a year and learns which leaves to eat.
5. **What does this teach us?** Being slow and still is a real survival plan, not weakness — it fits the whole forest.
