NINE-BANDED ARMADILLO

Dasypus novemcinctus · Forest, scrub, and grassland — Americas
Insectivore · Wild-range diet

3-SECOND CHECK Do I see the insect diet — dominating the bowl?

THE RULE What they would naturally come across in their wild range, by percentage of natural diet. Nothing else.
Soil and leaf litter — invertebrates dominate; small amphibians and reptiles supplement.

≈90% BASE always visible in the bowl

≈10% TREATS hand-fed or scattered — never in the bowl

BASE
Ants & termites
primary wild prey

TREAT
Beetles & grubs
main protein

TREAT
Crickets & worms
approved insect diet

TREAT
Small prey
amphibians, small reptiles

TREAT
Eggs
occasional opportunism

Plus other plants and prey from their wild range — pesticide-free only.

NO PRODUCE-DOMINANT BOWL No produce-dominant bowls, no pellet substitutes. Approved insect diet must dominate.

HOW WE FEED

- Base must be visible in the bowl.
- Treats are hand-fed or scattered, never in the bowl.
- Baseline before guest hours — do not feed to fullness before guests arrive.
- All items pesticide- and herbicide-free.

MATCH THE BOWL — DON'T INTERPRET.

If unsure: Pause → Ask → Escalate. No substitutions without approval.

What a living thing can sense becomes its reality. Environment shapes design.
