HOMO SAPIENS

Homo sapiens

1. What can it see, hear, or feel?
It sees in color, hears many sounds, and can feel with hands that grip, point, and build.

2. Where does it live — and why?
It lives almost everywhere on Earth, because it can change its shelter, food, and clothes to fit the place.

3. How does it send messages?
It uses spoken words, written words, pictures, signs, and machines to share ideas across the world.

4. What does it do when something changes?
It plans, asks questions, and tries new tools. Sometimes it helps the world, sometimes it hurts it.

5. How does it learn?
It watches, copies, asks, and teaches others. Learning can take a whole lifetime.

6. How does it have babies?
A mother carries one baby for about nine months. Families usually care for their young for many years.

7. What are its limits?
It still needs clean water, food, air, and other living things. It cannot live alone on a dead planet.

8. What does this teach us?
We are animals too. Every choice we make shapes the world every other animal has to live in.

WHY IS THIS ANIMAL HERE?

Humans are one species among many — shaped by the same forces of evolution.

We live in almost every habitat on Earth, from deserts to cities.

Our choices now shape the habitats of almost every other species.

When its habitat shrinks:

- our farms, roads, and cities replace wild habitats
- our climate choices change weather, water, and food everywhere
- every species on this totem walk depends on what we do next

This place is not their natural home, but it can help keep the species alive.

Understanding that we belong to the animal kingdom — not above it — is the first step toward protecting it.

YOU ARE LOOKING AT ONE

Answer the eight questions about yourself.

FABRICATION NOTE — cut along crop marks; mount acrylic mirror flush.
Mirror size: 4.20 in × 6.52 in · 1/8 in acrylic mirror, rounded corners

THINK ABOUT THIS

If every other species on this walk depended on your choices, what would you decide to do differently?

What a living thing can sense becomes its reality.
Environment shapes design.
