SULCATA TORTOISE

Centrochelys sulcata

PART A — WHO IS THIS ANIMAL?

WHERE DOES IT LIVE?

Sahel region of Africa — arid grassland and savanna south of the Sahara

IS IT SAFE OR IN DANGER?

Endangered

PART B — HOW THIS LIVING SYSTEM WORKS

1. WHAT CAN IT SEE, HEAR, OR FEEL?
   - Its sense of smell guides it to dry grasses and fibrous plants.
   - Its eyes detect light level and movement across open, flat ground.
   - Its skin can absorb moisture from damp soil or air when water is available.
   - It feels vibrations through the ground from other tortoises and approaching animals.

Observation Prompt: What do you see it paying attention to right now?

2. WHERE DOES IT LIVE — AND WHY?
   - It lives in the dry grasslands and savanna of the Sahel belt in Africa.
   - It digs deep burrows to escape midday heat and stay cool underground.
   - Dry, tough grasses and fibrous plants are its primary food source.
   - Its home habitat can experience years with very little rainfall.

Observation Prompt: What would happen if this habitat changed?

3. HOW DOES IT SEND MESSAGES?
   - Males produce a loud, resonant call during the mating season.
   - Males ram each other with their shells to compete for the right to mate.
   - Shell color and size signal age and condition to nearby tortoises.
   - They move toward water sources after rain — a behavior linked to breeding activity.

Observation Prompt: Can you spot a behavior that might be a signal?

4. WHAT DOES IT DO WHEN SOMETHING CHANGES?
   - During peak heat, it retreats into its burrow and stays underground.
   - In very dry periods it reduces activity and movement to save energy.
   - It is most active in early morning and late afternoon when cooler.
   - When approached, it pulls its head and legs inside its shell.

Observation Prompt: What happened when someone walked by?
